

Steel Dump Trailers

Earn More Profit

▶ Designed for Optimum Payload

East Steel Dump Earns You More – An

You'll make more profit per payload with an East steel dump trailer. That's because we build East steel dump trailers to give you more payload per trip – yet we maintain strength, so you don't waste your profits with downtime and repairs.

The life cycle advantages alone make an East steel dump trailer one of the most cost-effective trailers you can buy. You get the added value of our one-year limited warranty, support from our nationwide network of trained dealers and the higher resale value that East quality brings.

More Payload

With an East steel dump trailer, you can haul more payload per trip. That's earning power you can count on without paying a penalty in strength. The body of your East trailer is made from AR450 grade steel so your East trailer will resist twisting, flexing and cracking.

More Extras

Maximum uptime and reliability. Lower center of gravity. Our baked-on finish adds style and integrity. Many other details - such as high quality welds and precise component fit - testify to the meticulous care always built into an East.

Higher Resale Value

East has earned the reputation for quality that brings a higher resale value.

and Costs You Less – In The Long Run.

Long-Life Chassis

All East steel and aluminum chassis are constructed from one-piece I-beams. This design results in fewer welds and joints than a fabricated beam, and provides more efficient use of material – putting the strength where it's needed. Chassis crossmember gussets are bolted – not welded – to allow the assembly the flexibility to give under normal stresses and vibrations.

Sealed Rear Gate Latch & Hardware

The bottom of our tightly sealed gate latch and top hinge of our long-life hardware is bolt-on, cast steel for easy replacement. For maximum strength and resistance to cracking, our rear hinge mount is attached to the mainframe web then connected to an outer pocket gusset. The hinge shoes are mounted on a 2-3/4-inch diameter high Brinnell hollow tube for longer wear life and tight tolerances.

Durable Floor Design

We offer longer floor life with longitudinal beams that reduce contortion. We build extra support into our floors so you get extra service life. Twin longitudinal 4-inch x 4-inch box beams are full length to reduce body twist.

Strong Hoist Base

The hoist base assembly is made of 1/4-inch thick, 3-inch x 5-inch seamless tubing for extra strength in this high-stress area.

Choice of Axles Suspensions and Wheel Assemblies

East offers a choice of axle, suspension and wheel assemblies, building the assembly that best meets your specific needs – in your choice of tandem, tri-axle, multi-axle or lift axle.

Protected Wiring

Sealed beam lamps and isolated ground wiring are used for all lights. A sealed wire harness is enclosed in a water-resistant rear panel, reducing exposure to corrosion and failures in this vulnerable area.

Baked-On Finish Adds Style & Integrity

East steel dump trailers are sandblasted, primed and coated with a baked-on paint finish to give your East steel dump trailer a durable, classy look. We also rounded the corners and smoothed the transition lines for a sleeker, trimmer appearance.
